Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 182 Row: f Column: 6
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                        LeuGlnHisValThrAspLysIleIleMetLysLysGluLysGluGluGlyIleGluLys 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is from the BBSRC/Jundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, BBSRC/Jundee/Nottingham/Sanger/Sheffield/UMIST cDNA was prepared from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from limbs, normalised, and poly A-trimmed. BCORI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 (bases 1 to 860)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC Alzheiner's disease; autolimmune disease (e.g. systemic lupus (erythematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus) (c) myeloid or lymphoid cell disorders (e.g. anaemia and thrombocytopaemia) (c) wounds, ulcers, burns; bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head (c) traumal; lung or liver fibrosis; reperfusion injury in various tissues; bacterial, viral or fungal infections; allergic conditions such as collected and traumatory diseases (e.g. haemophilia); (c) cancer and tumours; and inflammatory diseases (e.g. septic shock, Crohn's (e) disease, anaphylaxis). The protein may be used to inhibit the growth, (c) infection of infectious agents such as bacteria, fungi, (c) viruses, or to effect bodily characteristics, biorhythms or circadian (c) cycles of rhythms. The protein may also have (c) groliferation/differentiation, stem cell growth factor, haematopoiesis (c) groliferation/differentiation, stem cell growth factor, haematopoiesis (c) regulation, immune stimulating or suppressing, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, and antinflammatory (c) activities. The cDNA sequences of the invention are useful for expressing recombinant protein for analysis. The present sequence represents a novel human cDNA sequence of the invention, this sequence is an expressed conditions and expressed sequence tag (EST) and was identified using subtractive hybridisation
                                                                                                                                                                                                                                                                         밁

(I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutamate transport or motor neuron disorder, such as CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like CC condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell caplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. Alzheimer's disease) cor sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a CC metalloprotease MP1 polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 462-463; 473pp; English.

CC The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or CC ameliorating a medical condition, particularly an immune disorder, an CC aberrant glutamate transport or motor neuron disorder, such as CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like CC condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Puntington's disease or Tourette syndrome), liver CC and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis CC or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic CC fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease Or Parkinson's disease). This sequence represents a metalloprotease MP1 polynucleotide
New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Fig 1A-C; 473pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-FEB-2001; 2001US-0266518P.

CC rhe invention relates to an isolated polypeptide comprising: any of 28 cc sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequence, 94% identical to a sequence (CC of 703 or 267 amino acids, 96% identical to a sequence of 414 amino (CC acids, or 97% identical to a sequence of 422 amino acids, all given in (CC the specification; or a biologically active or immunogenic fragment of (CC in diagnosing, treating and preventing diseases or conditions associated (CC with the decreased expression of protein modification and maintenance (CC alterosclerosis), autoimmune/inclammatory diseases (e.g. cancer, (CC allergies), neurological disorders (e.g. stroke, Parkinson's disease, (CC allergies), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. cendometriosis), developmental, vesicle trafficking disorders, and (CC infections (e.g. bacterial, viral, parasitic, proteozoal). These are also (CC sefully) in assessing the effects of exogenous compounds on the expression (CC fragments are useful in screening compounds for effectiveness as agonist (CC or antagonist of the polypeptides, or in altering the expression of the captering protein.protein interactions, drug-target interactions, and (CC or measuring protein.protein interactions, drug-target interactions, and (CC encoding a human PMOD protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 91; Page 211; 225pp; English

They are also useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenetics) and prophylactic and therapeutic methods. The nucleic acids may also be used in chromosome mapping, tissue typing and forensic biology and as surrogate markers. Sequences of the invention are also used in gene therapy. The present sequence is human glycoprotease

CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7) CC transmembrane receptor), 65507, 81580 or 14354 nucleic acid molecule (or CC a sequence which is at least 60% identical to the six nucleic acids or CC their open reading frames, fragments of at least 15 nucleotides or CC their open reading frames, fragments of at least 15 nucleotides or CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included CC are a host cell containing the nucleic acids (used to produce the CC proteins), the encoded proteins, an antibody that selectively binds to CC the polypeptide, and identifying a compound that binds to/modulates the CC activity of the polypeptide. The nucleic acid molecules, polypeptides and CC methods are useful for diagnosing, treating cancer, aberrant cellular CC proliferation and/or differentiation, immune disorders, heart disorders, CC cardiovascular disorders including endothelial cell disorders, pain CC cand metabolic disorders, blood vessel disorders, brain disorders, many CC examples of these disorders are given in the specification). The present CC sequence is the Human CDNA 28472 encoding a glycoprotease

                                                                                                                                                                                                                                                                                     CC The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CR 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding CC a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC sequences that encode a human seven transmembrane domain (77M). The CC 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid and polypeptide sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, cardiovascular disorders, endothelial disorders, hematopoietic disorders, CC liver disorders or platelet disorders, pain and metabolic disorders, sarcoma, leukaemia, Hodgkin's disease, autoimmune disorders include carcinoma, CC sarcoma, leukaemia, Hodgkin's disease, autoimmune disorders, farnetion, ci schaemic heart disease, Crohn's disease, autoimmune disorders, CC hypertension, atheroselerosis, heart failure, myocardial infarction, CC syndrome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral curronsa, crechexia or diabetes. This sequence encodes the novel human glycoprotease carcinome and content or diabetes. This sequence encodes the novel human glycoprotease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       endothelial disorder; hematopoietic disorder; blood vessel disorder; brain disorder; pain; metabolic disorder; liver disorder; diabetes; platelet disorder; carcinoma; sarcoma; leukaemia; Hodgkin's disease; autoimmune disorder; hypertension; atherosclerosis; heart failure; myocardial infarction; ischaemic heart disease; Crohn's disease; Grave's disease; Kawasaki syndrome; Raynaud's disease; aneurysm; cerebral ischaemia; peripheral neuropathy; Alzheimer's disease;

The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                       The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is that of a human soft tissue sarcom within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

The invention relates to a novel isolated human diagnostic and C therapeutic polymucleotide (designated dithp). The novel dithp polymucleotide comprises: any of 188 DNA sequences consisting of 195-7798 comprising a naturally occurring polymucleotide sequence at least 90% identical to the dithp polymucleotide; a polymucleotide complementary to the dithp polymucleotide or its polymucleotide which is at least 90% cidentical; or an RNA equivalent of any of the polymucleotide semiconed cantidatetic, immunosuppressive, neuroprotective, noticipenic, antiinflammatory, cerebroprotective, antilipaemic, citatorpic, virucide, hemostatic, anti-HIV, antithyroid, thyromimetic, crombolytic, anticogulant, anotectic, anti-HIV, antithyroid, thyromimetic, crowel DITHP polymucleotides polypeptide, antiparasitic, anti-Composition, anticogulant, anotectic, anti-HIV, antithyroid, thyromimetic, crowel DITHP polymucleotides polypeptide, antiparasitic, anticompolytic, anticogulant, anotectic, vasotropic, and antiulcer. The covel DITHP polymucleotides polypeptide, antiparasitic, anticomposition, and antiulcer. The covel DITHP polymucleotides polypeptide, antiparasitic, anticomposition, polymucleotides polypeptide and antiulcer. The covel DITHP polymucleotides polypeptide, antiparasitic, anticomposition, these diseases include cancers (e.g. adenocarcinoma, leukaemia, melanoma, brain cancer, breast cancer, cervix cancer, bone cancer, liver cancer, lung cancer) or other cell proliferative disorders (e.g. arteriosclerosis, addison's disease, thyroiditis, multiple sclerosis, osteoarthritis, rheumatoid atheroselerosis, orthosis, hepatitis, polycythemia vera, primary thrombosis, hypotiuitarism, hypogonadism, gigantism, goiter) metabolic carborovascular disease, thyroiditis, composition, developmental disorders (e.g. disease, canxiety, schizophrenia), asstroine, Alzheimer's disease, pick's disease, (c.g. hypercholesteroine, developmental disorders (e.g. uters), metabolic connective tissue disorders (e.g. akinesia or multidrug resistance), or fise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 200

Comprising a disruption in a protease target gene (PG) selected from CC calcium activated neutral protease type 5 (CAPN5) gene, tryptase 4 gene CC and sialoglycoprotease-like gene. Also described is a targeting construct (CII), comprising a first polymucleotide sequence homologous to at least a first portion of PG, a second polymucleotide sequence homologous to at least a second portion of PG and a selectable marker. (II) is useful for CC producing a transgenic mouse comprising a disruption in a protease target CC gene, by introducing (II) into a cell, introducing the cell into a CD blastocyst, implanting the resulting blastocyst into a pseudopregnant CC mouse, where the pseudopregnant mouse gives birth to a chimeric mouse, CC and breeding the chimeric mouse to produce the transgenic mouse. (I) is CC useful for identifying an agent that modulates the expression or function CC determining whether the expression or function of the disrupted protease carget gene, by administering an agent to (I) and CC determining whether the expression or function of the disrupted protease carget gene in (I) is modulated. (I) is also useful for testing the CC efficacy of proposed genetic and pharmacological therapies for human CC genetic diseases, such as neurological, neuropsychological or psychotic illness. The present sequence represents murine sialoglycoprotease-like gene sequence, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel transgenic animal, comprising a disruption in protease target gene, is useful for identifying agents that ameliorates a phenotype associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   06-DEC-2000; 2000US-0251803P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human;
